

OUR FIRST GROUND BREAKING CEREMONY

The Brome-Missisquoi MRC and the Régie intermunicipale de gestion des matières résiduelles de Brome-Missisquoi (RIGMRBM), the municipal's waste management site, are happy to take their shovels to the ground and announce that the construction of our composting platform will now officially begin.

The RIGMRBM has started the construction of our composting platform and the purchasing of brown bins as well. These bins will be distributed to the population next August.

Collection for most municipalities is expected to begin in September 2018.

Continue following The New Guy to find out what the next steps will be concerning bin deliveries and the start of the collection process.
